Roll Num : 717823P314
Name : Gopiga R

Task 1: Guided Activity, Student profile card

```
import Foundation
let studentName = "Gopiga R"
let rollNumber: Int = 314
var semester: Int = 6
var cgpa: Double = 8.62
let isHosteller: Bool = true
print("Name: \(studentName), Roll: \(rollNumber), Semester: \(semester)")
semester += 1
cgpa = 8.60
print("Name: \(studentName), Roll: \(rollNumber), Semester: \(semester), CGPA: \(cgpa)")
// studentName = "Gopiga"  // Error: Cannot change a constant
print(type(of: studentName))
print(type(of: rollNumber))
print(type(of: semester))
print(type(of: cgpa))
print(type(of: isHosteller))
```

Output:

```
Name: Gopiga R, Roll: 314, Semester: 6
Name: Gopiga R, Roll: 314, Semester: 7, CGPA: 8.6
String
Int
Int
Double
Bool
```

Task 2: Practice Task, Temperature converter

```
import Foundation
var celsius: Double = 25.0
var fahrenheit = celsius * (9.0 / 5.0) + 32.0
var kelvin = celsius + 273.15
print("Celsius: \(String(format: "%.1f", celsius)) °C")
print("Fahrenheit: \(String(format: "%.1f", fahrenheit)) °F")
print("Kelvin: \(String(format: "%.1f", kelvin)) K")
celsius = 30.0
fahrenheit = celsius * (9.0 / 5.0) + 32.0
kelvin = celsius + 273.15
print("\nAfter changing Celsius:")
print("Celsius: \(String(format: "%.1f", celsius)) °C")
print("Fahrenheit: \(String(format: "%.1f", fahrenheit)) °F")
print("Kelvin: \(String(format: "%.1f", kelvin)) K")
```

Output:

```
Celsius: 25.0 °C
Fahrenheit: 77.0 °F
Kelvin: 298.1 K

After changing Celsius:
Celsius: 30.0 °C
Fahrenheit: 86.0 °F
Kelvin: 303.1 K
```

Task 3: Debug Task, Fix the compile errors

```
let price = 250
var quantity: Int = 3
let taxRate = 0.18
price = 300
let total = price * quantity * taxRate
var title = "Order"
title = 42
print(total)
```

Error:

price = 300 -> price was declared using let, so its value cannot be changed. Use var if it must change.

price * quantity * taxRate -> Cannot convert value of type Double to expected argument type Int price and quantity are integers, but taxRate is a Double. Convert the price to Double before multiplying.

title = 42 -> Cannot assign value of type Int to type String title was initialized with "Order", so Swift inferred its type as String. Assign text instead.

Corrected Code:

```
import Foundation
var price: Double = 250.0
var quantity: Int = 3
let taxRate: Double = 0.18
price = 300.0
let subtotal = price * Double(quantity)
let tax = subtotal * taxRate
let total = subtotal + tax
var title = "Order"
print("Title: \(title)")
print("Subtotal: \(subtotal)")
print("Tax: \(tax)")
print("Total: \(total)")
```

Output:

```
Title: Order
Subtotal: 900.0
Tax: 162.0
Total: 1062.0
```
